Machine Analysis of Aeroflot Scheduled Operations

This report consists of eight IBM listings which contain information based on the 1963 summer timetable of Aeroflot. In each listing, all of the flights are grouped in a different arrangement and order so as to provide for a particular type of analysis, such as airport activity, traffic density on individual routes and utilization of aircraft types. One of the principal objectives of the report is to furnish data in various groupings, from which aircraft and seat kilometers scheduled to be flown during the summer of 1963 can be calculated. For this purpose the seats on each aircraft are shown as given in the timetable, or when not given, they are shown as the standard number of seats for the aircraft concerned. Distances in kilometers have been obtained, in order of availability, from (1) Soviet texts, (2) USAF reports, (3) other intelligence reports and (4) map measurements using known routes, with cross-checking as necessary to reconcile variances.

The sub-totals and totals of aircraft-kilometers and seat-kilometers resulting from machine multiplication and addition represent the scheduled accomplishment for one week of summer-time flying. The Aeroflot timetable contains international and domestic main line flights only, and consequently this report does not reflect the operations of a number of flights subordinate to the Territorial Administrations and Separate Air Groups, scheduled in local timetables which are seldom available. Such flights are conducted with piston type aircraft, many of which are the small An-2's and helicopters. On a current annual basis, the operations of Aeroflot not included in this report are judged from Soviet statements to yield less than 15 percent of all passenger kilometers flown domestically. On the other hand, the figures for freight and mail ton-kilometers scheduled represent only a small portion of the actual accomplishment of Aeroflot, for the reasons that most freight flights are unscheduled and that much mail and some freight are carried on passenger flights.

In the following pages, there are provided a description of each of the listings, an explanation of the columnar headings, an index of codes of the operating components subordinate to Aeroflot, and an index of the phonetic abbreviations used for points of origin and destination, and for intermediate stops.

Approved For Release 2000/05/15 : CIA-RDP79T01049A002900090001-0

Approved For Release 2000/05/15 : CIA-RDP79T01049A002900090001-0

Although care has been exercised in the preparation of this report, in view of the large number of entries, some inaccuracies and inconsistencies may be present, but none should be extensive. Comments or suggestions pertaining to the data and to the arrangements of the listings will be appreciated.

DESCRIPTION OF LISTINGS

1. Flight Number Order, All of Aeroflot

All flights, regardless of mission or destination, are listed in numerical order as they are numbered in the Aeroflot 1963 Summer Timetable. The flights in the Timetable prefixed by a zero are listed ahead of other flights. No other controls are used and no totals are provided.

2. Flight Number within Major Grouping (International Passenger, Domestic Passenger, Freight, Mail)

This and all subsequent listings are first divided into (a) International Flights (all passenger), (b) Domestic Passenger, (c) Domestic Freight, and (d) Domestic Mail. The secondary sort within each of these categories is by order of Flight Number.

3. Subordination within Major Grouping as in Number 2

Main sort, after divisions stated in heading Number 2 as applicable to all subsequent listings, is alphabetical by Subordination. Within Subordination, the flights are sorted in alpha-numeric order for Aircraft Type, and when both Subordination and Aircraft Type are alike, they are listed in Flight Number Order.

4. Type of Aircraft within Major Grouping

Main sort is by Aircraft Type. Within Aircraft Type, the flights are sorted by subordination, and where both Aircraft Type and subordination are alike, they are listed in Flight Number Order.

5. Origin within Major Grouping

Primary sort is alphabetical by Origin. Within Origin, there is a secondary sort, also alphabetical, by Destination. Where both Origin and Destination are alike for two or more flights, the flights are listed in Flight Number Order.

6. Destination within Major Grouping

Primary sort is alphabetical by Destination. Within Destination, there

Approved For Release 2000/05/15 : CIA-RDP79T01049A002900090001-0

Approved For Release 2000/05/15 : CIA-RDP79T01049A002900090001-0

Type of Aircraft

Standard Soviet designation for civil transport aircraft.

Frequency

Number of times per week that each flight is scheduled to operate.

Distance

Official, estimated or measured distance of the flight in terms of kilometers, rounded to the nearest 5 or 10 and cross-checked to reconcile variances.

Total

Frequency multiplied by distance gives aircraft kilometers.

PFM

Passenger, Freight, or Mail Flight.

Seats, Payload

For passenger flights, the figure indicates the number of individual seats available on each flight. For freight and mail flights, the figure is intended to represent the metric ton payload capacity of each aircraft for the maximum distance to be flown without stopping.

Total

The final total column carries the products of the aircraft kilometers and the seating or tonnage capacity of each flight. Figures for freight tons and passengers could not be combined in the types of listing provided, as conversion to "passenger tons" and "passenger ton kilometers" on individual flights would have been impracticable. No sum totals are shown in Listing No. 1, which necessarily intersperses passenger, freight and mail flights.

Explanation of Columnar Headings

Page No.

Number of Page of Aeroflot 1963 Summer Timetable.

Flight No.

Exactly as given in Aeroflot 1963 Summer Timetable - order does not necessarily conform to order of page numbers.

Subordination

Designation of Soviet Territorial Administration or Separate Air Group responsible for the flight. Soviet abbreviations are used whenever they are known, except for the Moscow Territorial Administration of Special Purpose Aviation and Local Air Routes (MTU) which is referenced in this report as MASP. For Territorial Administrations and Separate Air Groups which always are spelled out in the timetable, four-letter abbreviations have been set up, (see Index List of Subordinations).

Origin, Stops 1-6 and Destination

Four or five letter phonetic symbols are used for place names. (See List of Place Names). A single asterisk in column 1 under Stops indicates either that the flight was scheduled for a fixed period in the summer only, i.e., it did not commence prior to 15 May and did not operate subsequent to 30 September, or that it was scheduled to operate on a lower frequency in the winter months than in the summer. A double asterisk in Column 1 under Stops indicates that the flight was designated to operate on special order only, probably meaning that its fulfillment would depend upon the number of applicants for transportation on each scheduled day.

Direction

Indicates the general direction of each flight, North, East, South or West. The directional symbols have not been used as controls in any of these listings and are included primarily for purposes of orientation.

is a secondary alphabetical grouping by Origin. Where the two correspond, the listing is in Flight Number Order.

7. Origin within Aircraft Type within Major Grouping

Primary sort is by Aircraft Type in alpha-numeric order. The secondary grouping is alphabetical by Origin, and within Aircraft Type and Origin, there is a tertiary grouping which is alphabetical by Destination. Where all three correspond, the listing is in Flight Number Order.

8. Distance within Aircraft Type within Major Grouping

Main sort is by Aircraft Type in alpha-numeric order. Within each Aircraft Type, the flights are listed by Distance in descending order of magnitude. For like aircraft types and distances, the flights are grouped by Origin in alphabetic order.

C-O-N-F-I-D-E-N-T-I-A-L

ERRATA

In Listings Numbers 1-4, there are certain disparities in distances between identical points, owing to differences in original sources. These were brought into focus when Listing Number 5 was proof-run, and they were reconciled and corrected in Listings Numbers 5-8. The net difference in total domestic passenger-seat kilometers resulting from the corrections proved to be an increase of less than 0.4 percent, (3 million out of approximately 800 million), and it was therefore decided not to re-run the first four listings at this time. Recipients of the Report are requested to disregard the entries for distances in Listings Numbers 1-4 in cases of conflict, and to use the corrected entries in Listings Numbers 5-8.
